Describe your Drinking Water System

The Township of Wilmot owns and operates the water distribution system for the Village of New Dundee, including pipes and appurtenances (herein called ‘the waterworks’). The scope of the waterworks begins at the point where treated water enters the works from the RMOW and ends at the property lines of the consumers. The distribution system does not provide treatment to the water. There is no chlorine boosting, secondary disinfection, pressure boosting or pressure control within the control of the waterworks. The incoming treated water for this distribution system is supplied by the Regional Municipality of Waterloo (RMOW). The water source is two wells, ND4 and ND5, which directly supply New Dundee with no other works connections. The distribution system serves a population of about 950 consumers and has 9.75 Km’s of water main, 89 main control valves and 8 flush hydrants on the distribution system. The supply is monitored 24/7 by Scada operators located at the RMOW’s Mannheim treatment plant.

List all water treatment chemicals used over this reporting period

N/A – See the Region of Waterloo’s report for details of treatment chemicals.

Were any significant expenses incurred to?

- Install required equipment
- Repair required equipment
- Replace required equipment

Please provide a brief description and a breakdown of monetary expenses incurred

N/A – See the Region of Waterloo

Provide details on the notices submitted in accordance with subsection 18 (1) of the Safe Drinking Water Act or section 16-4 of Schedule 16 of O.Reg.170/03 and reported to Spills Action Centre
